TRADE LIST

OF "CALIFORNIA'S CHOICEST
FLOWER SEEDS . . . SINCE 1890"

Prices in this List are effective at once for all sales from 1939 crop during the remainder of 1939 and the spring of 1940. This Trade List will be in effect until issuance of our 1940-41 Novelty and Trade List in August, 1940.

Bodger Seeds, Ltd.
WHOLESALE GROWERS

LOS ANGELES COUNTY EL MONTE CALIFORNIA, U. S. A.

CABLE ADDRESS: Registered
"Bodger El Monte" All Codes

Printed in U. S. A.

The attractive early California style building which houses our office force at El Monte.

Terms and General Conditions of Delivery

ALL SEEDS are quoted F.O.B. El Monte, California, for delivery after harvest crop 1939, 60 days net, less 2% cash 30 days. All invoices payable in U. S. dollars in or by New York or Los Angeles Exchange. All overdue accounts subject to sight draft without further notice.

Bags and containers will be charged at cost and are not returnable. There will be no charge made for bags smaller than the one pound size (5x7 $\frac{1}{2}$ inches).

Prices quoted in this list go into effect immediately, superseding all previous quotations. **All orders of 4 ounces or over will be charged at the pound rate; all orders under 4 ounces will be charged at the ounce rate.**

We reserve the right to change any or all prices in this list without notice.

For every order, we agree to plant sufficient land to produce the desired quantity of seed under normal conditions.

In case of crop shortages, orders will be filled pro rata only.

Crop failure or any cause beyond our control releases us entirely from delivery.

We give no warranty, express or implied, as to description, quality, purity, productiveness, or any other matter of any seeds we sell, and we will not be in any way responsible for the crop. If seeds are not accepted on these terms, they are to be held subject to our order.

BODGER SEEDS, LTD.

Shipping Information

Domestic: Time is important. Many of our customers use the Air Mail exclusively to save time and get the most possible out of our rapid order filling and delivery service. We suggest that you do the same. If your order is sent to us by Air Mail from the east coast it arrives the second day, is filled the same day it arrives and if shipped by Parcel Post seed will reach you within seven days from the time the order left your office. Correspondingly less time is needed when shorter distances are covered. For faster delivery, seeds shipped by Air Mail or Air Express will reach you within four days from the time your order is sent to us. For the greatest possible saving in time, send your order by wire to be shipped by air; seeds will arrive within two to three days from the time ordered.

Contrary to the general impression, Air Express is not expensive. Rates are calculated on the basis of half pounds, and are very close to the ordinary Parcel Post rates.

Air Mail, which is more expensive, is calculated on an ounce basis and goes as first class mail. Air transportation is no longer in the experimental stage; it is an established fact—safe, sure and economical.

Regarding rail shipments, both Parcel Post and Express will take 4 to 5 days to reach the east coast. When the shipment is over 10 pounds in weight it is cheaper to ship by express, but when it is less than 10 pounds, Parcel Post is cheaper. Parcel Post packages marked "Special Delivery" are given first class mail service and will go through practically as fast as first class matter.

Shipments of 75 pounds or over can be sent most economically by Freight. Package cars leave Los Angeles twice a week, arriving in Chicago the 7th morning and in New York the 10th morning. Contract orders and others placed considerably in advance of the time needed should be sent by Freight.

Foreign: We urge our foreign customers to use the Air Mails when sending rush orders. With the new Air Mail service across the Atlantic, there is a great saving in time, over and on both sides of the ocean. Air Mail letters are given preference over regular mail in all handlings.

When sending orders by cable, we suggest the use of our number code to cut down on words and expense. Five numbers in a unit may be sent for the cost of one word, a rate which reduces costs considerably.

Corner of a lovely garden planted with Bodger's seeds.

Bodger Service Department

Novelties: The amateur gardener is novelty conscious, and it is easy to sell a new variety. Novelties are your logical sales leaders, and it is decidedly to your own advantage to make good use of them in your newspaper publicity, your advertising, and your counter features in the store. Make your selections from among the novelties listed herein and you cannot go wrong.

Transparencies: Our new colored transparencies are your busiest silent salesmen. They are accurately hand colored on translite film, printed from our regular photographic negatives. Placed in your store window, on the counter, along the walls with the seed racks, or near the cash register, they attract attention at once, and show your customer the actual flower of the seed you have for sale. Write us for full details regarding transparencies and the cabinets in which to display them.

Electros: Included in this price list are many new black and white electros in standard sizes and new four-color nickeltypes, as well as a great many new subjects in the smaller 1"x1½" electros. We expect to issue an Electro Catalog this summer which will include all of our new electros and nickeltypes.

All electros we send out are unmounted unless the order specifies that they be mounted. There is an additional charge of 20% for this service. Since a majority of our customers prefer unmounted electros we have followed this policy, but will be very glad to have them mounted for any who so request.

Photographs: Through our Photographic Service we are able to furnish you with a complete line of first class photographs of novelty and standard flower varieties suitable for publicity and catalog purposes. Photographs will be submitted for approval upon request.

Bulletins: The most ambitious effort of our Service Department is the publication of a series of bulletins on various flower subjects. Bulletin No. 1, *The Zinnia and Its Uses*, Bulletin No. 2, *Asters of Today*, and Bulletin No. 3, *Petunias, Past and Present*, have been distributed; if you have not received copies, write us and they will be forwarded promptly.

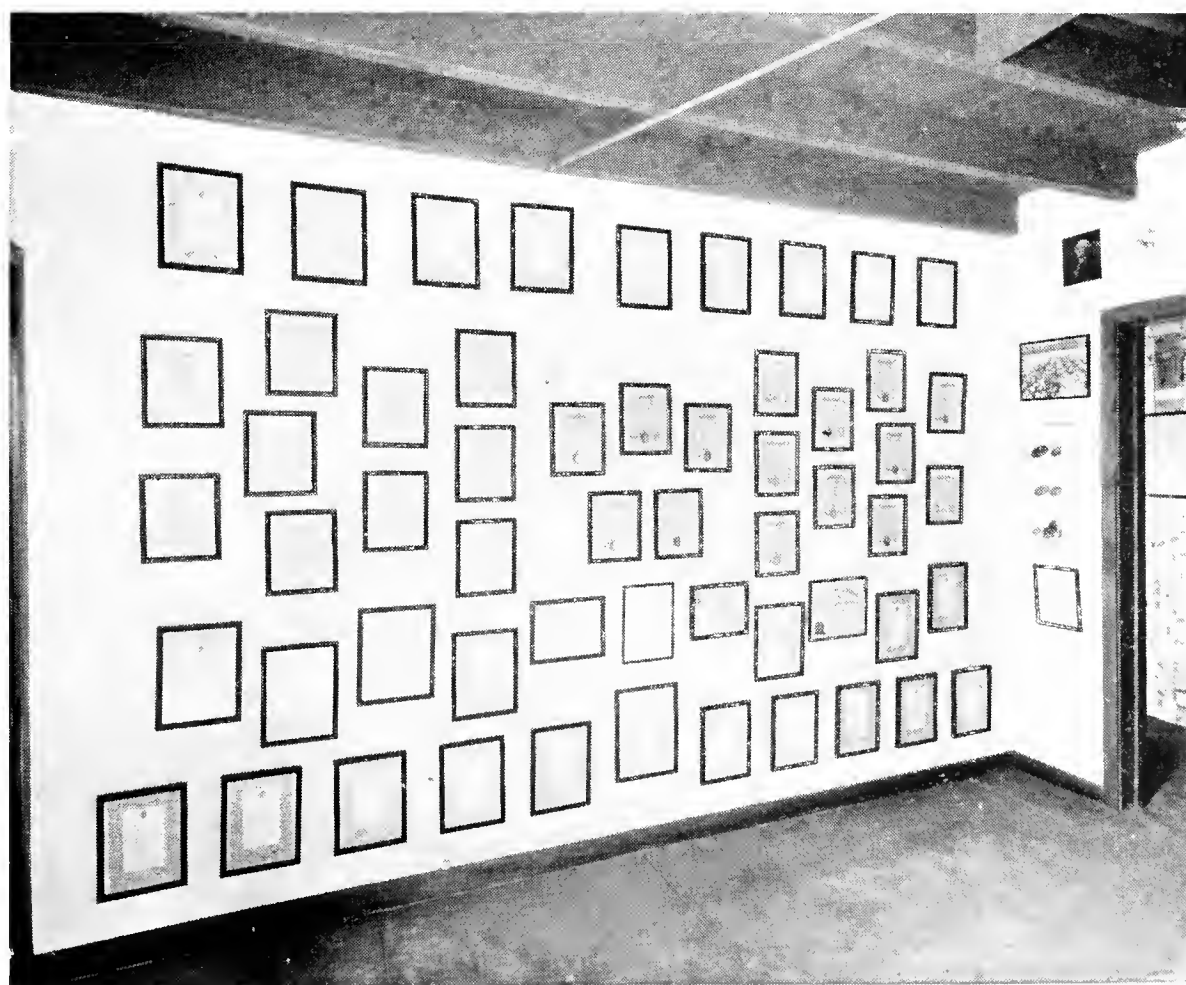

One of our large farm units in the fertile El Monte Valley.

Bodger Service Department

Horticultural Colour Chart: In certain sections of this catalog, we have added to the regular description of a variety some numbers and words in italics. These refer to color blocks in the Horticultural Colour Chart which many of our customers have secured either from us or from the Royal Horticultural Society direct. To visualize the exact color of the flower thus described, refer to your copy of the Colour Chart, turn to the page mentioned, mask the color block with the black mat provided and you will see the exact shade of the variety. For instance, Larkspur Stock Flowered Rosamond is described as *625 shaded 623*. These page numbers will be found in the upper right hand corner of each sheet in bold face type. *625* is the predominating color of the bloom with a shading of color *623*. Larkspur Stock Flowered Rose Queen, similar to Rosamond, is described as *623/1 and 623*. These two color tones will be found on page 623, block *623/1* being a slightly lighter tone of the full color *623*, both of which very similar colorings are found in this variety. We have been able to compile fairly complete color recordings on the Larkspur, Stock and Sweet Pea groups this year. By next year we expect to have practically all of our flowers described in terms of the color blocks of the Horticultural Colour Chart. We believe that by this method you will be able to visualize the colors of the several varieties much more vividly than any word description can do.

All-America Awards: In order to make the All-America awards more easily understood by the general public, there has been a slight change in designation of the various awards. We have made the changes in our list in accordance with this new set-up as follows: GOLD MEDAL remains the same (G. M.); the old Award of Merit is now SILVER MEDAL (S. M.); the old Special Mention is now BRONZE MEDAL (B. M.); and the old Recommended is now HONORABLE MENTION (H. M.).

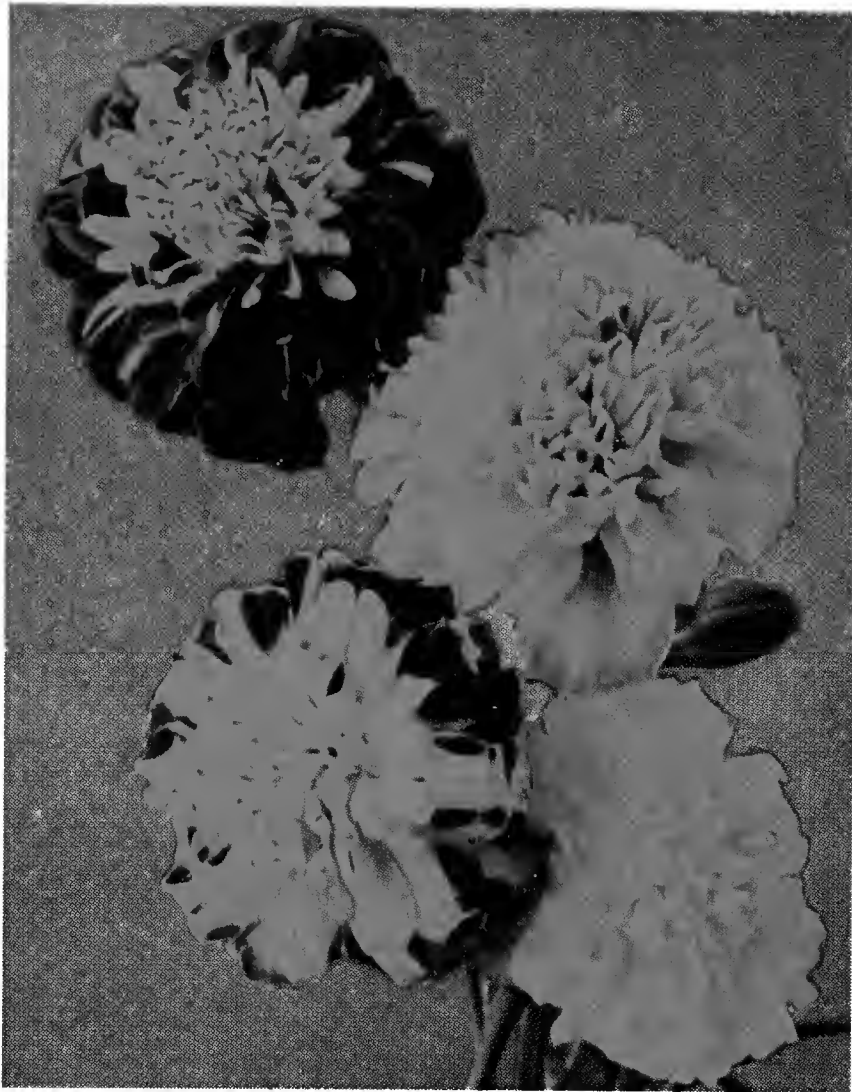

We hope you are featuring as many of the All-America winners as possible.

One wall of our trophy room, showing awards and medals granted to our flower seeds by Horticultural Societies in various parts of the world.

1939-1940

BODGER INTRODUCTIONS

No. 557—NICKELTYPES \$20.00

Marigold Harmony Type French Dwarf Double Harmony Hybrids (Bodger)

FOR SEVERAL years Marigold Harmony has been one of the most popular all around garden and cut flower plants. Practically 100% true, only occasionally has a break occurred in the stock of Harmony, but by utilizing the few breaks which have appeared, our plant breeding staff has succeeded in developing an excellent new strain of Marigolds embodying all the fine features of Harmony combined with a wide and varied color range. The compact plants are 12" to 14" in height, 100% All Double, and flowering commences about two and a half months after seed sowing—one of the earliest of all Marigolds. The neat, dwarf, compact habit of the Hybrids, combined with the extremely early, free flowering character of the plants make this new dwarf Harmony Hybrids one of the outstanding introductions of the season. Flowers are of medium size, rather large for the French type, averaging 1 $\frac{3}{4}$ " in diameter and do not have the strong Marigold odor. The color range includes the popular Harmony, our new Spotlight, a lovely golden orange shade, a distinct golden yellow and innumerable blotched and striped combinations of golden orange with maroon, and various shades of golden and lemon yellow with the contrasting dark maroon. All the flowers have the familiar crested center flanked by several rows of broad guard petals. As a showy garden subject, Harmony Hybrids take first honors and will undoubtedly supersede all other dwarf French types.

No. 5094 . . . Price per oz., \$2.15 Per lb., \$25.00

Approximately 10,000 seeds per ounce.

No. 492—ELECTRO \$2.25

Marigold Harmony Type French Dwarf Double Spotlight (Bodger)

A STRIKING, very showy companion to the popular Harmony Marigold, Spotlight takes its place on the Marigold roll of honor. Spotlight has all the fine qualities of Harmony, but with a much brighter, more colorful flower. The plants are about 12" to 14" high, very compact, extremely free blooming and unusually early, commencing to flower in early June, at least two weeks earlier than ordinary French varieties. The gay, brilliantly colored flowers are of medium size, about 1 $\frac{3}{4}$ " in diameter, are borne well above the foliage, and do not have the

strong Marigold odor. They have the characteristic Harmony flower formation, Scabiosa-like, with crested centers of dainty tubular petals in a bright, lively yellow shade which contrasts strikingly with the broad, velvety dark mahogany-red guard petals. We have already had very favorable reports on Marigold Spotlight from those who have it in trial this season. While the dwarf, compact habit places it primarily in the bedding class, it has been very favorably recommended for cut flower use as well.

No. 5090 Price per oz., \$2.55 Per lb., \$30.00

Approximately 10,000 seeds per ounce.

Marigold Harmony Type French Tall Double Harmony Mixture (Bodger)

EXCEPT for the habit and height of the plant, this new Marigold Mixture is identical with the Dwarf Double Harmony Hybrids. The flowers have the characteristic Harmony crested center flanked by deep mahogany-red guard petals, while the color range includes the popular orange and maroon-red combination of Harmony, the new bright yellow and mahogany-red Spotlight, golden orange and golden yellow self colors together with blotched and striped combinations of both orange and yellow shades with mahogany-red. It differs radically from the dwarf strain in the height of the plant, growing 20 to 24 inches tall, and the plant habit is more open. Like all the Harmony Type Marigolds, it is extremely early blooming, does not have the strong Marigold odor, and comes practically 100% double. We expect this new Tall Double Harmony Mixture to take the place of all other Tall French Double Marigolds.

No. 5098 Price per oz., \$1.30 Per lb., \$15.00

Approximately 10,000 seeds per ounce.

No. 559—NICKELTYPES \$20.00

Marigold Harmony Type French Tall Single Ferdinand (Bodger)

SAUCY, sprightly and colorful, Ferdinand is one of the gayest of our new flowers. Unlike its companions in our new Harmony Type group, Ferdinand is single flowered with a neat round, crested center of dainty tubular florets in an arresting shade of golden yellow (5) surrounded by a single row of broad, mahogany-red guard petals. While the flowers are of only medium size, $1\frac{1}{2}$ to $1\frac{3}{4}$ inches in diameter, they are extremely showy and attractive. The plants are tall growing, 20 to 24 inches, with an upright, semi-compact, yet full foliated growth habit. Stems are well over a foot in length, making Ferdinand a fine new cut flower subject as well as an attractive and showy garden plant. Like all of the Harmony Type Marigolds, Ferdinand is early blooming, commencing to flower within three months after the seed is sown, and does not have the strong Marigold odor.

No. 5084 Price per oz., \$2.55 Per lb., \$30.00

Approximately 10,300 seeds per ounce.

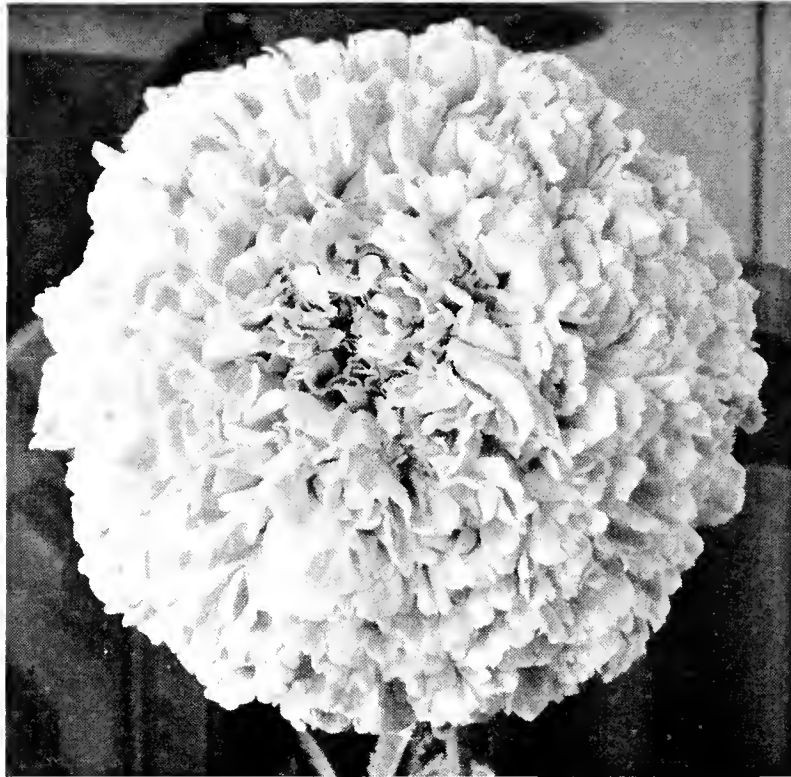

No. 531—NICKELTYPES \$15.00

Marigold Gigantea Full Double Orange (Bodger)

A FEW YEARS ago we introduced the extremely popular Orange Sunset Marigold, which unfortunately carried a heavy percentage of single flowered plants. We now take pleasure in presenting Marigold Gigantea Full Double Orange, a strain of this same popular, large flowered Marigold in an all-double or full-double type. The flowers are, without doubt, the very largest of any Marigold variety, averaging 5 inches and over in diameter when grown in the field and obtaining a size up to 7 inches with special feeding for show purposes. The color is a deep, rich, lively orange which combined with the unusual size of the flowers makes this new Full Double Orange one of the showiest and most colorful of garden subjects. Although the foliage carries the characteristic Marigold odor, the flowers themselves are delicately sweet scented. Even though of extreme size, the flowers are loosely formed, very full centered with broad, heavy, wavy petals which gracefully overlap and make a flower ideal not only for garden decoration, but for cut flower use as well. The plants are strong growing, upright branching in habit, somewhat dwarfer than the older variety Orange Sunset, usually 2½ to 3 feet tall, and producing a heavy growth of foliage with six or eight heavy branches each bearing three or four large flowers. The new Full Double Orange is also somewhat earlier blooming than Orange Sunset, commencing in late July in the warmer climates and in late August or early September in the northern sections. We present Marigold Gigantea Full Double Orange with every confidence that it will be enthusiastically accepted by the entire flower loving world.

No. 4988 Price per oz., \$2.55 Per lb., \$30.00

Approximately 8,000 seeds per ounce.

No. 482—ELECTRO \$2.45

Marigold Gigantea Full Double Mixture (Bodger)

A FULL-DOUBLE or all-double counterpart of the popular Marigold Sunset Giants, we present the improved Marigold Gigantea Full Double Mixture for your approval. As in Sunset Giants, the color range includes deep orange, golden orange, deep golden yellow, light yellow, lemon yellow and the lovely new primrose shade. The robust plants produce a heavy growth of foliage with six to eight heavy branches each bearing three or four large flowers. The plants are dwarfier than in Sunset Giants, usually 2½ to 3 feet tall, with a more compact growth, and they are earlier blooming, coming into flower in late July to early August in the warmer sections and late August to early September in the colder climates. A fine forcer in the greenhouse, Full Double Mixture with its extremely large, sweet scented flowers is a winner whether for cutting or garden use.

No. 4986 Price per oz., \$2.15 Per lb., \$25.00

Approximately 8,000 seeds per ounce.

No. 481—ELECTRO \$2.45

Larkspur Giant Imperial Pink Perfection (Bodger)

ON A PAR in every respect with our former two outstanding Larkspur introductions, Carmine King and White King, Pink Perfection is a distinct addition to the color range in the popular basal branching Giant Imperial group. It has all the fine qualities of the popular Bodger or King type of Larkspurs with 2 inch florets of rounded broad petals evenly and closely spaced on the stem, giving a very heavy Hollyhock-like cutting spike 24 inches or more in length. The plants are tall, basal branching, upright in habit and very free flowering. The color is a very luscious shade of lively light pink (*623/2 and light salmon pink*) similar to the Stock Flowered variety La France. Early flowering, Pink Perfection comes into bloom about the same time as the Stock Flowered variety, Rosamond. Ideal as a florist color, Pink Perfection is also a magnificent addition to the home garden.

No. 4464 Price per oz., \$1.30 Per lb., \$15.00

Approximately 8,000 seeds per ounce.

No. 468—ELECTRO \$2.45

Aster Wilt Resistant Early Giant Rose Marie (Bodger)

ROSE MARIE is a fascinating, rich, lively shade of rose which is probably the most popular color in Asters. It also belongs to the Early Giant Wilt Resistant group, fast becoming the most popular Aster type. With this happy combination of characters, Rose Marie should most certainly be one of the outstanding cut flower introductions of the season. The flowers are full-petaled with broad, graceful petals, daintily plumed and intertwined, very large, 4 to 5 inches in diameter, and similar to the Giants of California blooms. While the flowers resemble the Giants of California, the plants however differ considerably since they are only 1½ to 2 feet tall with branches coming low on the central spike and only 6 to 8 flowers are produced on each plant. There are practically no laterals or side branches. One of the most desirable characteristics is the early blooming habit of the Early Giant type, flowers being produced with us during the first two weeks of August, so they can safely be counted on by the first week of September in any section. Rose Marie is indeed an excellent cut flower variety and, although not as free blooming as the branching type, is also a distinct addition to the garden. Fully wilt resistant, it can safely be grown in any soil. Rose Marie is the third introduction in our new Early Giant Wilt Resistant strain, former varieties being Light Blue, a Silver Medal winner in the 1939 All-America Selections, and Peach Blossom.

No. 30 Price per oz., \$2.55 Per lb., \$30.00

Approximately 12,000 seeds per ounce.

No. 470—ELECTRO \$2.25

Aster Giant Harmony Mixture

(Bodger)

IN PRESENTING our new Giant Harmony Aster, we are introducing a new cut flower type. Similar in habit to the Giants of California, plants are 2' to 2½' tall, with very long basal branching stems, bearing 4" to 4½" blooms. These large flowers have full-double quilled rounded centers, which open

bright gold, surrounded by several rows of broad short guard petals. Colors include lovely shades of light and deep blue, flesh, peach blossom, silvery rose, purple and white. Available in a mixture only this season, we expect to have separate colors soon. We believe this Giant Harmony type will be one of the leading asters for shipping. Although not wilt resistant, Aster Giant Harmony Mixture is well worth growing.

No. 888 Price per oz., \$1.70 Per lb., \$20.00

Approximately 12,000 seeds per ounce.

Stocks Double Giant Column Gardenia (Bodger)

AS LOVELY and elegant as the exotic Gardenia from which it borrows its name, this new Stock of ours is the crowning achievement of the plant breeder's efforts. With superbly formed, magnificent spikes composed of individual florets 2" to 2¼" in diameter, this remarkable new Giant Column Stock is indeed the last word in perfection for its class. Shimmering, glistening white, the flowers are the purest snow white of any Stock variety yet introduced. Producing only one flower spike to a plant, this spike will however be of enormous size, 12" to 15" of florets and nearly 3 feet in length, and 4" or even 4½" in depth, with the individual florets closely and compactly placed on the stem. The robust habit and uniformity of type combined with a high percentage of doubles places Gardenia definitely in a class by itself with no peer among the finer flowers for the high class florist trade.

No. 6816 Price per oz., \$8.50 Per lb., \$100.00

Approximately 19,000 seeds per ounce.

No. 489 ELECTRO \$2.20

No. 497—ELECTRO \$2.20

Ipomea Alamo Vine or Mile-A-Minute Vine

AS THE NAME, Mile-A-Minute Vine, would imply, this little Morning Glory is a very fast growing and attractive vine which thrives with outstanding success in the hot, dry, southern parts of the country and we are confident will do equally well in any situation. The foliage is fine and multi-cut, stems are rather wiry and the runners obtain a growth of as much as 20 feet or more in a season. The flowers are creamy white, about 1½ inches in diameter, deep wine red at the center and, unlike most members of this family, open late in the morning with the bright sun and remain open during the afternoon, rather than the reverse. Although there are not a great many flowers open at any one time, the plants remain in bloom over a period of many weeks, commencing about the first of August. They bloom until late in the fall and are not affected by the first light frosts. The main value of the plant is as a quick growing and most attractive vine for use as a covering on fences or trellises. Since the foliage is dainty and delicate in appearance, it makes a lacey tracery of green rather than a heavy deep growth. Although it has been very popular in parts of Arizona for a good many years, we believe this is the first time the so-called Alamo Vine or Mile-A-Minute Vine has been grown commercially for general distribution.

No. 4358 Price per oz., \$.15 Per lb., \$1.50

Approximately 240 seeds per ounce.

Violettas The Little Dwarfs Finest Mixed

WE CONSIDER it a privilege to announce that through a special arrangement with the introducers, Dobbie & Co. Ltd., of Edinburgh, Scotland, we have been appointed exclusive agents for the Americas, Australia, New Zealand and the Asiatic countries for the outstanding Scottish flower introduction of the year, Violettas "The Little Dwarfs." This is an entirely new type of miniature Viola, one of the most delightful little plants that has ever been presented to the garden world. The flowers are small and perfect miniatures of Violas, with broad, beautifully rounded petals, making a flower of almost symmetrical roundness. They have a very delightful sweet scent and come in a wide range of colors previously unknown in this family. Among these colors are canary yellow, campanula blue, sulphur yellow splashed with hyacinth blue, purplish violet with a creamy eye, creamy yellow with deep yellow center, parma violet shot with petunia purple, creamy white, and many others, each with a distinct yellow eye. The habit of the plant is neat and compact, forming dense cushions of green, studded with flowers which are held erect on short, wiry stems. The Violettas will grow and bloom freely for nearly six months of the year in almost any type of soil and require very little attention. They are particularly suitable for use as a bedding plant, for edging, in rockeries, in miniature gardens or in window boxes. The Violettas were developed by Mr. D. B. Crane, who unfortu-

No. 496—ELECTRO \$2.45

nately passed on before they were actually introduced to the public. He modestly sums up his work in the following paragraph which was taken from the Royal Horticultural Society Journal for March 1939:

"I have been working on these plants (Violettas) since the early nineties and had some good successes before the Great War. Unfortunately I lost some of my better sorts during the war, but by persistent effort since, by selection and otherwise, I have got together a large and most interesting collection embracing colours common to the ordinary Viola. They are now a source of unflinching interest to me, as they comprise blossoms of the most dainty and charming character and most of them are very fragrant."

No. 8370 In Introducers' Packets Only, in Three Sizes, Priced at:

Per Dozen	Per 100	Suggested Minimum Resale Price, Per Packet
\$2.00	\$16.50	\$.25
3.00	24.75	.40
5.00	41.25	.65

We regret that since going to press, we have been advised by cable that Dobbie & Co. Ltd. have taken this novelty off the market for the coming season. Further particulars will follow.

No. 556—NICKELTYPES \$20.00

Zinnia Fantasy Wildfire (Bodger)

WE HAVE been more than ordinarily pleased with the very rapidly increasing popularity of the Fantasy type of Zinnia. It is one of the most interesting of the newer Zinnia developments, and with its friendly informality is certainly maintaining its place as a reigning favorite in the Zinnia family. With the addition of separate color varieties, the usefulness of this gaily informal flower is greatly enhanced. As a very vivid companion to Star Dust, Rosalie, Orange Lady and White Light, we are this year offering Wildfire, a rich, dazzling scarlet. Wildfire adds a distinct note of color and cheerfulness to the garden and will enliven any home when used in flower arrangements. The plants are neat in habit, strong growing and very free blooming, 2½ to 3 feet in height, coming into flower 45 to 50 days after the seed is sown. In growing this or any other Zinnia, we strongly recommend sowing the seed where the plants are to bloom if this is at all possible. Furthermore, when watering, rather than use the sprinkler, irrigate by the trench method and let the water run slowly for several hours until it has soaked down thoroughly into the ground through and beyond the roots. By this method, you will have to water the plants only once every two weeks or so if the top soil is properly cultivated after each irrigation. Excellent results will be obtained by this method.

No. 1340 Price per oz., \$1.05 Per lb., \$12.00

Approximately 5,000 seeds per ounce.

Zinnia Early Wonder Padre (Bodger)

NO annual is more colorful or anywhere near as free flowering during the first hot weeks of early summer than the Early Wonder Zinnias. The 15" to 18" plants with long wiry stems, almost devoid of foliage, and extreme earliness make this Zinnia peculiarly well adapted for cut flower use. Successive sowings every ten days or two weeks are recommended to have fresh flowers in good condition all through the summer and late fall.

No. 475—ELECTRO \$2.35

Our latest color development in the Early Wonder type is a bright, dazzling scarlet, with flowers of medium size, produced in riotous profusion on each plant. Padre is a worthy addition to the Early Wonder group and will win new friends for its type wherever it is grown.

No. 1514 Price per oz., \$1.05 Per lb., \$12.00

Approximately 3,300 seeds per ounce.

Zinnia Harmony Type (Scabious Flowered) Campfire (Bodger)

No. 474—ELECTRO \$2.45

CAMPFIRE is our most recent color development in the Harmony Type Zinnia (previously known as Scabious Flowered). Vivid, intense scarlet, the color is among the most showy in the Zinnia family. The flowers, of medium size, are carried on strong stems of good length for cutting while the free flowering plants reach a height of 2 to 2½ feet. The rounded or Scabiosa-like center of the flowers is flanked by one or two rows of broad guard petals of the same color. While the plants are very showy in the garden, the small flower size makes them particularly well suited for cutting use.

**No. 1470 Price per oz., \$1.05
Per lb., \$12.00**

Approximately 6,000 seeds per ounce.

EARLIER
INTRODUCTIONS BY
BODGER & OTHERS

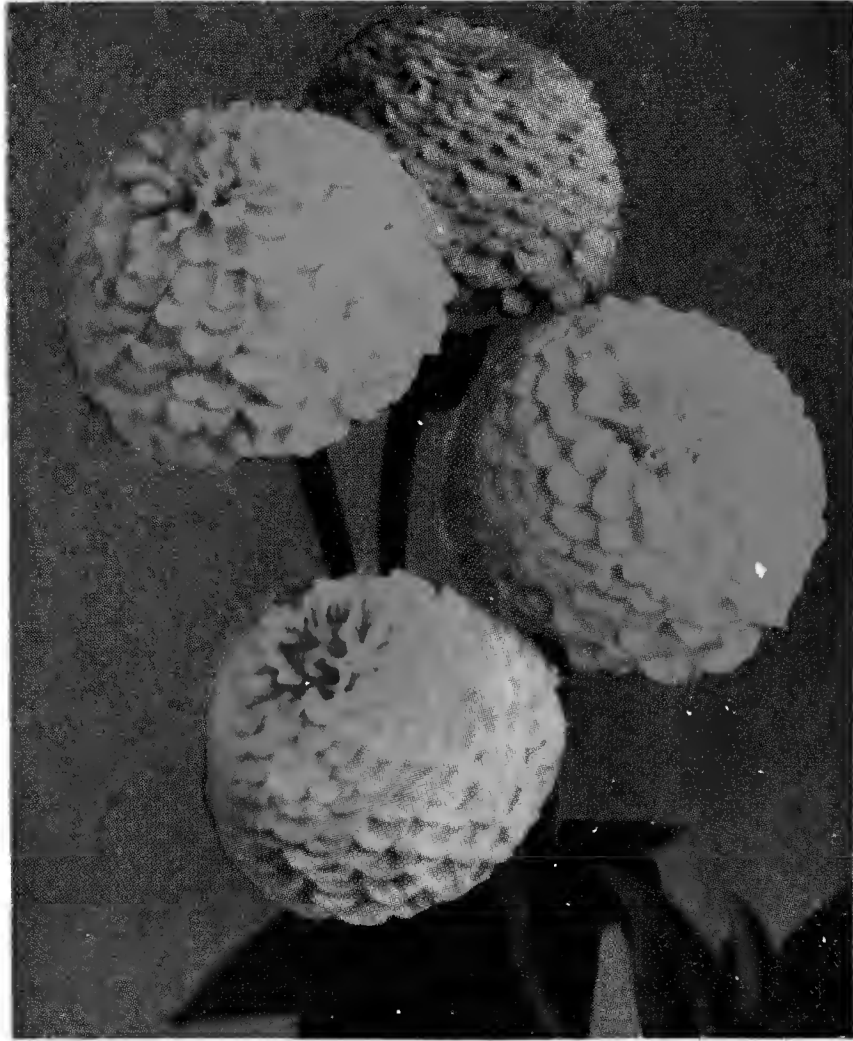

No. 558—NICKELTYPES \$20.00

Zinnia Super Crown O'Gold Pastel Tints (Bodger)

THE Pastel Tints Mixture in our new improved Crown O'Gold type is winning more and more enthusiastic boosters every day. All visitors to our ranches exclaim and enthuse over this Zinnia above all others. They agree with us that this is the very finest large flowered Zinnia introduction since the original Dahlia Flowered. Flowers are large and showy, 5 to 5½ inches in diameter, midway between the Dahlia Flowered and California Giant as to type, combining the ruggedness of the Dahlia Flowered with the soft effect of the California Giant. Strictly a mixture of pastel tints, it contains a wide range of pastel shades, including soft yellow, old gold, light pink, apricot pink, various shades of salmon, peach and buff, lively cerise salmon, as well as pure white and cream. All of the flowers carry the characteristic Crown O'Gold markings, that is, each petal of the flower is overlaid at the base with a deep golden yellow while carrying out the individual flower color at the tip. Delightfully soft, yet colorful for garden decoration, it is unexcelled for cutting among the larger flowered Zinnias. The plants are strong and robust, growing about 3 feet tall, and the flowers are borne profusely throughout the season, first appearing about 60 days after seed is sown. A warm sunny location with plenty of water applied by the trench method will give best results with this as well as any other Zinnia.

No. 1330 Price per oz., \$.90 Per lb., \$10.00

Approximately 2,800 seeds per ounce.

No. 539—NICKELTYPES \$15.00

Zinnia Lilliput Pastel Mixture (Bodger)

WHILE there is a great diversification of type in the newer Zinnia introductions, the older types are still maintaining their popularity. This is particularly true of the Lilliput or baby Zinnia. Because of the neat, compact, symmetrical form of the flowers together with their small size and stem length, they are particularly fine for cutting for bouquets in the home. When we think of flowers for cutting, our minds automatically turn to the pastel shades. Until recently, there has been no strictly pastel variety in the Lilliput type. In the Pastel Mixture, however, we have incorporated the very lovely soft shades of apricot, peach, creamy yellow, shell pink, delicate salmon, light rose and orchid which are prime favorites with florists and cut flower growers. The plants are 12 to 15 inches in height, neat in habit, compact growing and very free flowering. It is one of the early blooming types, producing flowers about 45 days after seed is sown.

No. 1420 Price per oz., \$.33 Per lb., \$3.50

Approximately 4,600 seeds per ounce.

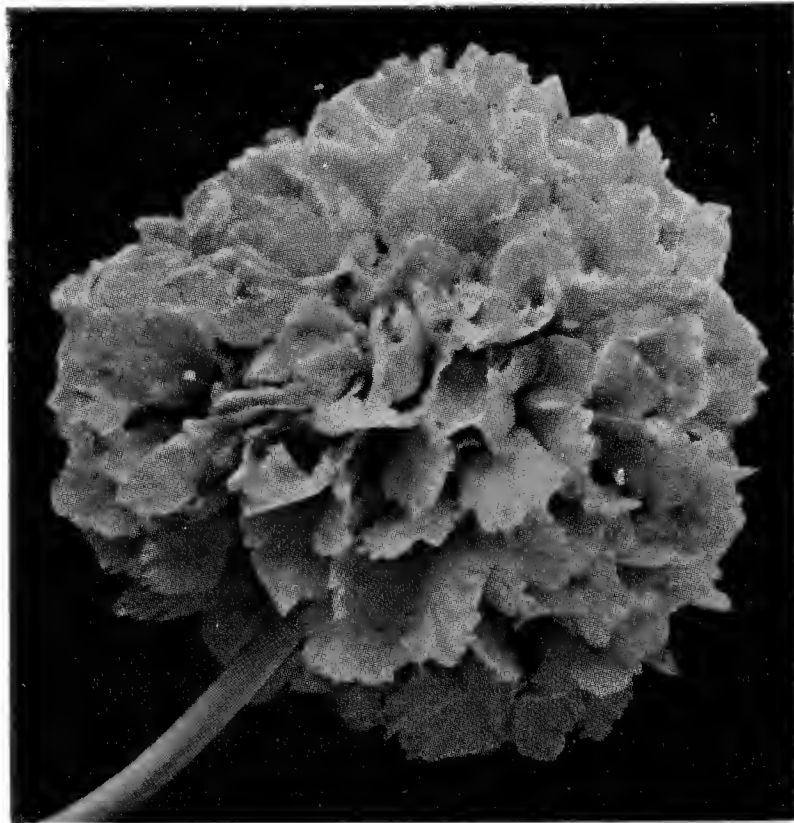

No. 537—NICKELTYPES \$15.00

Zinnia Linearis

THE most unusual and interesting of the newer Zinnias is the little dwarf variety, *Linearis*. The flowers, which are single, are a lovely shade of golden orange, with a delicate lemon yellow stripe through each petal, while the center is dark brown in the young flowers, turning golden orange as the flower develops. It is early blooming, commencing to flower when the plants are about 6 inches tall and keeping on right through the season until the late frosts of autumn. It never looks untidy, as the dozens of newly opened flowers prevent the faded ones from becoming prominent. The plants reach a height of 8 to 10 inches and with plenty of room for development may have a spread of as much as 2 feet by the end of the season. Flowers are produced in great profusion, literally hundreds being open at a time. *Linearis* is an extremely valuable addition to the list of plants suitable for border or edging use and is excellent for window boxes or in any part of the garden where a dwarf growing plant with brilliant coloring is desired. It is the longest lasting of all flowers in pots, and when cut will last nearly two weeks in water. It will start flowering about 10 weeks after seed is sown.

No. 1592 Price per oz., \$.80 Per lb., \$9.00

Approximately 123,650 seeds per ounce.

No. 555—NICKELTYPES \$20.00

Scabiosa Imperial Giants Blue Moon (Bodger)

Honorable Mention **ALL-AMERICA SELECTIONS** 1939

ALTHOUGH we hybridists may sometimes feel that the business of producing new flowers is just a routine day-after-day job, every once in a while we are buoyed up when we succeed in guiding a plant into unsuspected and hitherto unimagined beauty. Such has been our experience during the development of a strikingly beautiful Scabiosa which we present herewith—Scabiosa Imperial Giants Blue Moon. The flower form is as different from the existent Scabiosa varieties as Nasturtium Golden Gleam is different from the old singles or the Dahlia Flowered Zinnia differs from the old Zinnia types. Instead of a flower composed of a few rows of broad petals surmounted by a flat pincushion-like top of small petals, this new type has flowers composed entirely of broad, heavy, wavy petals, eliminating the pincushion center entirely. In other words, the flower is literally fully double. Because of this complete doubleness, the flowers are of course extremely large and deep, $2\frac{3}{4}$ inches across and 2 to $2\frac{3}{4}$ inches deep, about the shape of an old-fashioned beehive. The color is a rich deep lavender blue, a shade which maintains its effectiveness indoors or out. The plant type is just as great an improvement over the old as the flower itself. In its development we have followed the modern trend of streamlining for space saving. Plants are extremely upright growing, tall, 42 to 48 inches in height as grown on our ranches and the long, heavy yet wiry stems hold the flowers proudly erect, completely eliminating the weak necks which are a fault of older types. Blue Moon is an ideal cutting type, because of the stem length, fully 27 inches even when field grown, and especially because the large beautifully shaped flowers are a luscious shade of deep lavender blue so hard to find in annual flowers.

Petunia Giants of California Bodger's Supreme Florist Strain (Bodger)

ONE of the most striking sights on our Lompoc growing grounds this season has been a large planting of our remarkable new Giants of California Petunia Supreme Florist Strain. This has attracted the attention of more visitors than any other one field in the valley. Outstanding in its beautiful coloring, the flowers are in shades of pink, rose and salmon rose, all with light, richly veined throats, and many of them striped or combining two or more rose shades in one bloom. The blooms are unbelievably large, 5 to 7 inches in diameter, with shallow open throats surrounded by satiny petals which are so heavily ruffled that in the young flowers they are easily mistaken for doubles. As the flower fully matures, the petals fold back in a wider radius leaving the beautifully veined throat exposed. These huge, strikingly beautiful flowers are freely produced on strong growing, richly foliated plants, which will be 1½ to 2 feet tall by the end of the season, although the first flowers are produced when the plants are only 5 or 6 inches tall. As a subject for pot sale by the florist, this is an excellent strain since the first large flower is produced comparatively early before the plant makes any appreciable growth. It is an excellent bedding variety as well as a fine window box type. Dealers who have handled this strain declare they could not satisfy their particular clientele without it.

Petunia Grandiflora Nana Compacta Velvet Ball (Vis-Bodger)

Bronze Medal **ALL-AMERICA SELECTIONS** 1939

SEVERAL NEW PLANT types have been developed in Petunias recently, most of them showing the influence of streamlining. The new Grandiflora Nana Compacta type which we present herewith follows this streamlined tendency in a plant which comes as near as any so far developed to a round compact ball shape. The habit is the last word in excellence for compactness, dwarfness and free flowering character. The plants reach a height of about 8 inches, with a spread of only 8 to 10 inches and will have a dozen or more flowers in bloom at a time, each comparatively large, about 2½ inches in diameter, well shaped and of a deep luscious shade of velvety blood red. The variety comes remarkably true both to color and habit, having only about 5% off types and shades. For pot plant use, for florist sales, or as a border or edging plant, Velvet Ball has no equals. Those who have grown Velvet Ball very highly praise it as a gay, colorful, free flowering plant for the garden or window box. The same color as the older variety Flaming Velvet, Velvet Ball is a great improvement over the former variety.

Hollyhock Annual Indian Spring

Silver Medal **ALL-AMERICA SELECTIONS** 1939

INDIAN SPRING is one of the loveliest entries in last year's All-America Selections competition. Blooming as it does the first year in less than five months after seed is sown, it is a flower for everybody's garden. A profuse bloomer, there is a colorful display of the semi-double, crinkly edged flowers for several weeks during the summer. After the first bloom is past, if the plants are cut back they will produce a second crop of blooms the same season. While rose pink predominates, variations will occur from a very light pink to an almost crimson rose shade. Normally 3½' to 4' tall, plants may grow as high as 6' in some sections. Indian Spring is well worth adding to the list of easy-to-grow annuals.

Petunia Hybrid Hollywood Star

Silver Medal **ALL-AMERICA SELECTIONS** 1939

No. 485—ELECTRO \$2.45

HOLLYWOOD Star is a colorful, bright and cheerful addition to any garden. The individual flowers, of medium size, are produced with such great profusion that the whole plant seems to be a solid mass of color. Very early flowering, the strong, vigorous plants produce a profusion of golden throated, rich rose flowers throughout the warm summer months. The five pointed star-like formation of all Petunia blooms is greatly exaggerated in this variety, the points being drawn out to a very fine delicate tip.

Nierembergia Hippomanica (Dwarf Cup Flower)

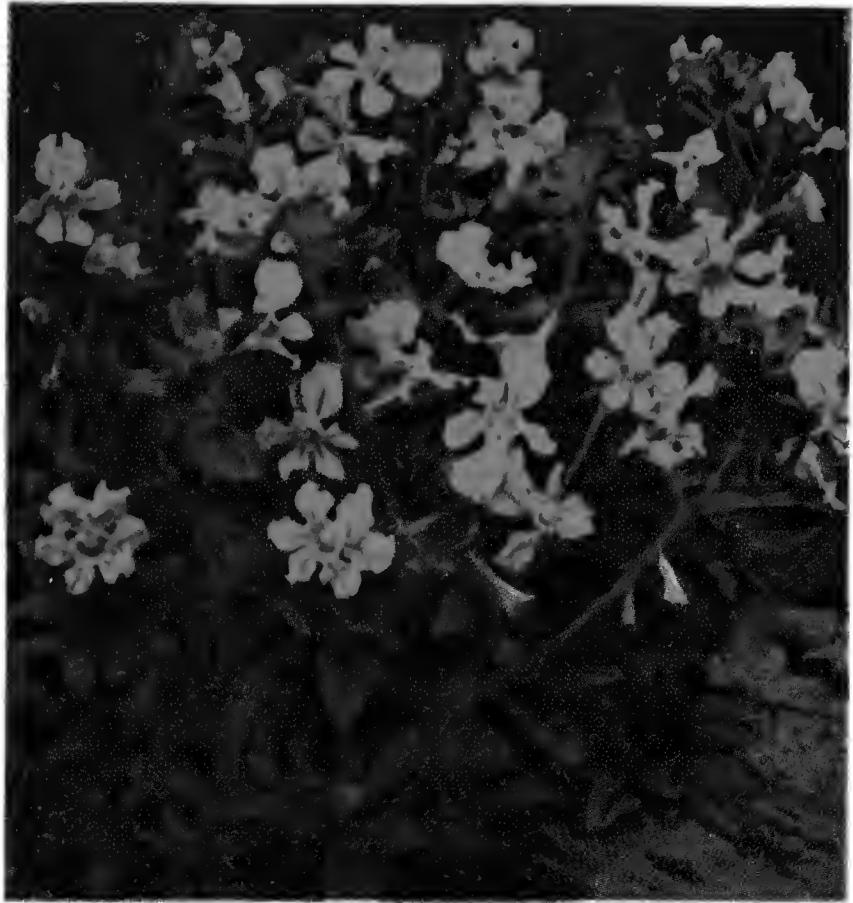

○ F ALL the hundreds of new flower introductions which have come under our observation during the course of the past few years, none has caused so much comment from visitors to our farms as this little Dwarf Cup Flower, *Nierembergia Hippomanica*. With the possible exception of *Zinnia Linearis*, it will outbloom any flower we have growing. It starts flowering when the plants are only about two inches tall, that is about 15 weeks after the seed is sown, and keeps on right up until the heavy frosts of late fall. It is at all times neat and tidy looking, the young flowers coming and covering the older flowers and seed pods. The lovely lavender blue shade, heightened by a touch of yellow in the center, is most charming. Plants are definitely dwarf, compact—streamlined, if you will—not over 5 or 6 inches tall, and with a spread of only 8 to 10 inches. Foliage is light gray green, very inconspicuous, and there are literally hundreds of flowers in bloom at a time throughout the summer. As an edging plant, for the border along a walk, or to outline beds of larger flowers, it has no equals, while for use in the rockery it is unexcelled and is extremely lovely in a window box or in flower pots. It is a half hardy perennial which will winter over if given some protection. In the southern warmer sections, no protection will be necessary. The plants should be cut back at the end of the season and will send out fresh growth in the early spring.

No. 5298 . . . Price per 1/4 oz., \$6.00 Per oz., \$20.00

Approximately 168,320 seeds per ounce.

Cuphea Firefly

THIS COLORFUL little border or edging plant has definitely made a place for itself in the garden scheme. Dwarf, compact, neat in habit, showy and colorful, Cuphea Firefly is indeed a joy for garden lovers. The flowers are small and delicately formed, butterfly-like in appearance, fiery cerise red in color, and are freely produced on compact plants which reach a height of about 10 inches. The general effect of a plant when in full bloom is that of a brightly decorated little

No. 535—NICKELTYPES \$15.00

Christmas bush. Firefly is excellent as an edging or border plant, is colorful for window boxes or flower pots, and adds a welcome touch of color to the rockery. It is a tender annual, flowering readily in 12 to 14 weeks from seed, and blooms profusely for several weeks. In a mass or tucked in among other plants, Cuphea is a delight.

Approximately 7,200 seeds per ounce.

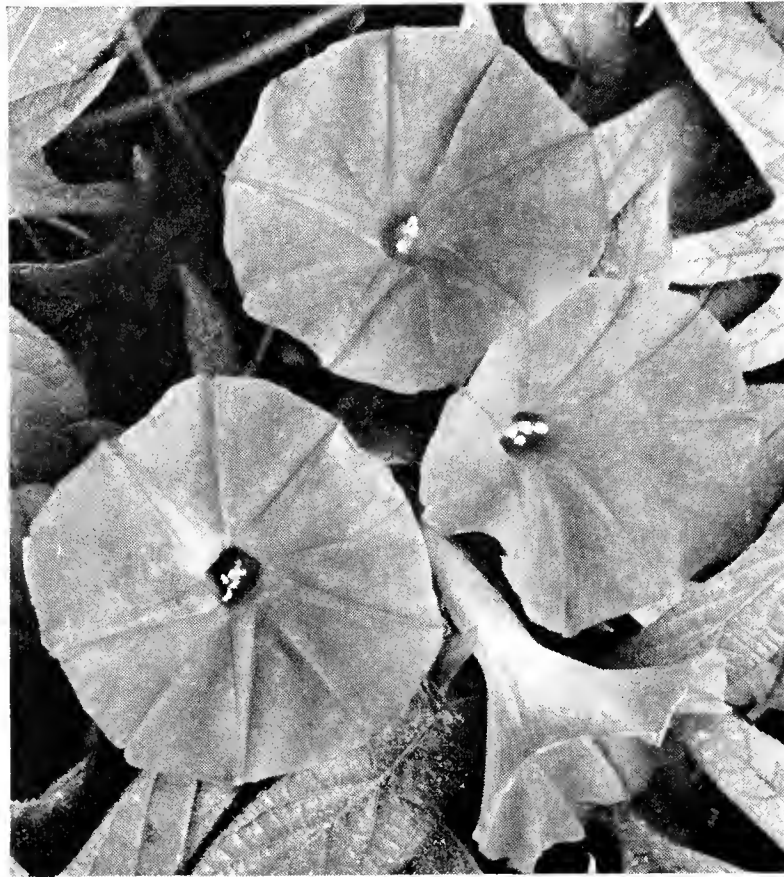

Delphinium Blackmore and Langdon Mildew Resistant Strain

THE FAMOUS Blackmore and Langdon Gold Medal Delphiniums need no introduction to any seedsman. The fact that there is now available a strain resistant to mildew may however be news to some. Although not all the seedlings will be 100% immune to the disease, repeated trials have proved it a definitely resistant strain. It has proved itself perfectly resistant when growing along side other plants which have become badly infected. Besides this, the strain is extremely hardy and well suited for growing in the colder climates and has shown strong resistance to all types of weather conditions. Practically all Delphinium colors are included in the mixture, although the lighter shades of blue will predominate. Although seed supplies are limited, we are very glad to announce that we are in a position to supply seed in bulk, as long as the supply lasts, as well as in the originators' packets. All seed is imported direct from the originators and is the very finest money can buy.

No. 3332 Price per oz., \$10.00 Per lb., \$120.00

Ipomea (Morning Glory) Scarlett O'Hara

Gold Medal **ALL-AMERICA**  **SELECTIONS** 1939

THE LONG awaited and somewhat obstreperous Scarlett O'Hara has at last been presented to a waiting garden world. Ever since word first began to filter through the trade that this Morning Glory was soon to be presented, interest has been running very high. Scarlett O'Hara is an entirely new color in this popular garden flower, rich dark wine red or deep rosy crimson. While the flowers are not quite as large as the Heavenly Blue Morning Glory, they are of good size, about 4 inches in diameter, freely produced on fast growing vines which start blooming within 65 days after seed is sown, and are very showy for covering a fence or trellis. Flowers are a lovely blaze of color during the morning, and until well into the afternoon, remaining open practically all day on cloudy or dull days. The dark green foliage does not make a heavy growth, leaving the plants graceful in appearance. As few plants are easier to grow or give a more colorful and satisfying return for the care given them than the Morning Glories or Ipomeas, Scarlett O'Hara will most certainly be a reigning favorite this season and for many years to come. Granted the only Gold Medal in the 1939 All-America Selections, Scarlett O'Hara has received tremendous publicity in newspapers and magazines and is in demand by every garden enthusiast. We urge all our customers to cover for seed supplies immediately.

No. 4384 Price per oz., \$1.05 Per lb., \$12.00

Approximately 700 seeds per ounce.

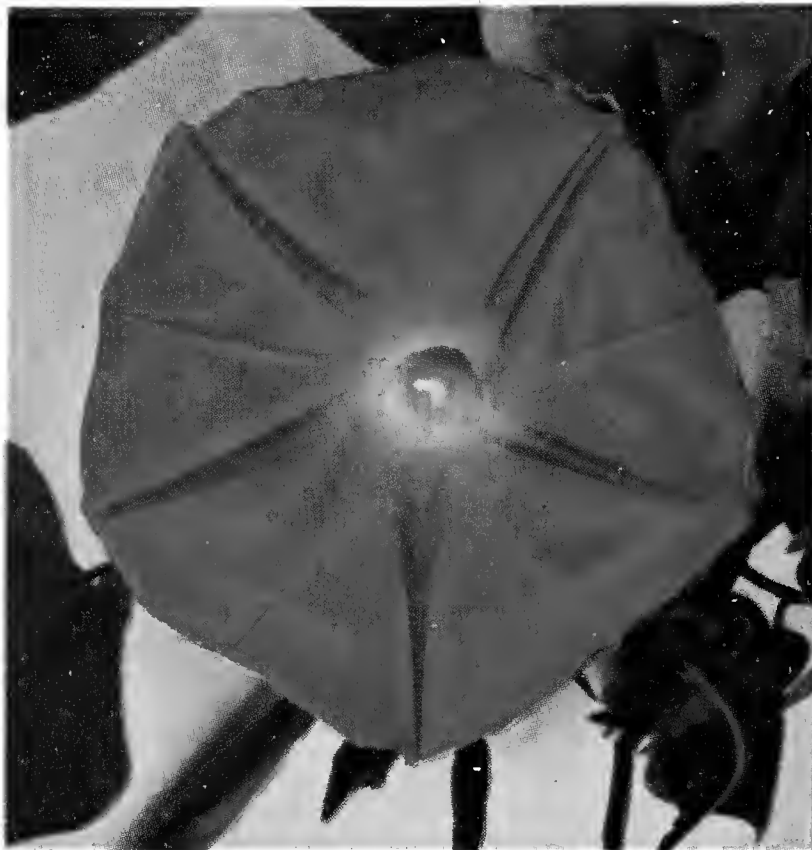

No. 480—ELECTRO \$2.50

Ipomea Cornell

THIS NEW variety Cornell combines the brilliant coloring of Scarlett O'Hara with the size of bloom and robust habit of the Heavenly Blue Morning Glories. The blooms are large, 4 to 4½ inches in diameter, in an intense shade of carnelian red with a border a little over an eighth of an inch wide of pure glistening white, the colors of Cornell University, the famous university on the hill. The plants are thick growing, make a rather heavy growth of very attractive bright green foliage, commencing to flower when the vine is only 2 or 3 feet tall. Much more free blooming than its more famous companion variety, Scarlett O'Hara, Cornell is in a class with Heavenly Blue in this respect. Blooming will continue until the first killing frost of autumn. We consider Cornell a worth while addition to this group of flowers.

No. 4388 Price per oz., \$.70 Per lb., \$8.00

Approximately 670 seeds per ounce.

No. 548—NICKELTYPES \$15.00

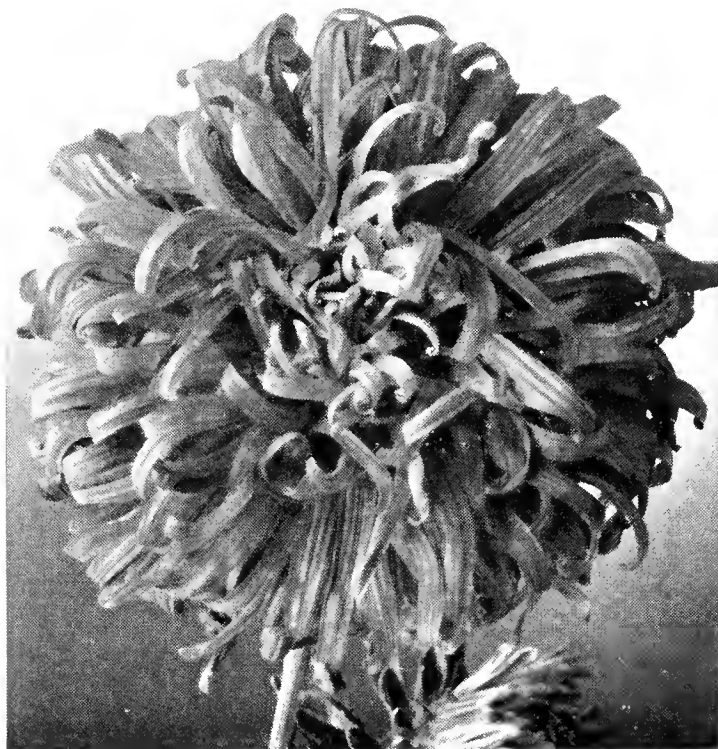

Ipomea Clarke's Earliest Heavenly Blue Morning Glory

THE BEAUTIFUL sky blue of the Heavenly Blue Morning Glory is unquestionably one of the loveliest shades in any flower, a beautiful sky blue color which shades at the center to a golden throat. Throughout the south and other sections where Morning Glories are extensively grown, Clarke's strain will need no introduction. It is the earliest flowering variety, makes a sparse growth of foliage and is heavily covered with flowers. These flowers are very large, of the characteristic Morning Glory form, and flowers are open and in the fullness of their glory of color ten to twelve hours every day, closing very late in the afternoon. For covering a fence or trellis, or climbing over a small building, the Heavenly Blue Morning Glory is ideal. As it is a tender annual, seed should not be sown until late in the spring. In order to get the greatest quantity of flowers from the strain, seed should be planted in a dry sandy location where the plants will receive as little water as possible and they should never be fertilized unless a heavier growth of foliage is required. If desired, seed may be started early indoors, but if so, should be planted in individual pots as Ipomeas do not transplant readily.

No. 4370 Price per oz., \$.35 Per lb., \$4.00

Approximately 675 seeds per ounce.

Aster Early California Giant

No. 469—ELECTRO \$2.35

ASTERS *a*

LARGE FLOWERED, HEAVY STEMMED, SPECIAL FLORIST VARIETIES

EARLY GIANT WILT RESISTANT *f* (Bodger)

The finest large flowered, heavy stemmed wilt resistant Aster yet developed. Flowers are of the large Giants of California type, while the plants are less tall, about 1½' in height, with strong heavy stems. This class is early blooming, coming into flower four to six weeks earlier than the Giants of California, that is during early to mid August. An exceptional new class.

	Per oz.	Per lb
34 Light Blue (Bodger) (S.M.,A.A.S.'39)	1.30	15.00
38 Peach Blossom (Bodger), opens white, flushes lavender pink	1.30	15.00
30 Rose Marie (Bodger) (new) (See page 13)	2.55	30.00

SUPER GIANT *f*

This is the largest and most fully double Aster class known. The flowers are from 6" to 8" across, with full petaled, graceful, interlacing petals. Plants are about 2½' tall, with six to eight long, non-lateral stems per plant.

20 El Monte (Bodger) (B.M.,A.A.S.'36), crimson	1.05	12.00
26 Los Angeles (Bodger) (S.M.,A.A.S.'34), shell pink	1.05	12.00

EARLY CALIFORNIA GIANT *f* (Bodger)

A new early blooming strain of the Giants of California Aster. The flower size and form are the same as in the later blooming group, while the plant habit resembles the Beauty class, with branching beginning rather high on the main stem, the flowers being borne erect. Blooming commences a week or more earlier than in the late class, or about the end of August under our conditions. We very highly recommend the new Early California Giant Asters for short season districts, or wherever a large flowered type is wanted early in the season.

ASTER WILT AND WILT RESISTANCE

The so-called wilt disease of Asters is caused by a specific parasitic fungus, which may attack the plant at any stage in its growth from the seedling to the seed-producing age. The spores of the fungus may be carried on Aster seed and on inert matter with the seed, on the implements used in preparing the soil, and in the soil itself. When once introduced into the soil, it persists indefinitely and makes the land "aster sick," that is, whenever an ordinary strain of Asters is planted into that particular soil at any time thereafter, the wilt fungus living in it will attack the plants and they will die off at some stage of their growth.

A wilt resistant strain of Asters, however, is one which, although planted on the very sickest soil available, will withstand the attacks of the fungus and develop into strong, healthy plants. Just as some people or animals withstand the attacks of certain diseases, while others become sick at the first sign of an epidemic, so the resistant strains of Asters will withstand the attack of the wilt fungus, while the non-resistant strains will succumb.

See our Bulletin No. 2, Asters of Today, for full details on Aster diseases and culture.

Zinnia Dahlia Flowered Will Rogers

No. 472—ELECTRO \$2.35

ZINNIAS**a*

We have been Zinnia specialists for many years, taking the lead in their development ever since our first outstanding Zinnia introduction, the Dahlia Flowered strain, which was rightly named a New Flower for the People. This type, developed in our experimental department and introduced by us in 1919, was the turning point which changed completely the status of the once unpopular Zinnia family. Since this time, we have developed and introduced many new types and varieties in the now extremely popular Zinnia group. Many additional varieties are in the process of development in our Zinnia workshop and will be presented within the course of the next few years. See our Bulletin No. 1, The Zinnia and its Uses, for full details on Zinnia Types and Culture.

TALL, LARGE FLOWERED TYPES

BODGER'S GOLD MEDAL DAHLIA FLOWERED *f* (Bodger) (G.M.,R.H.S.'24)

The Dahlia Flowered strain was introduced by us in 1919, and all the colors have been of our introduction at various times since then.

The plants are of medium height, 2½'-3', very robust, bearing many strong stems of the fully double, huge flowers which resemble the show type of Dahlia. We have marked the most popular varieties with an asterisk (*).

DELPHINIUM PACIFIC GIANTS *pf* (Vetterle and Reinelt)

Remarkable new strain developed by Vetterle and Reinelt on the Pacific Coast. Flowers extremely large and well formed, 2½" to 3½" in diameter, symmetrically spaced on well balanced spikes of thin woody stems, practically 100 per cent double. This strain is comparatively mildew resistant. Seed we have to offer includes shades produced by the originator as well as these same varieties and a mixture of our own growing produced from the originator's stock seed.

LARKSPUR GIANT IMPERIAL (*) *af*

Tall, upright, compact, basal branching in habit, the Giant Imperials have superseded all other types of Larkspurs for florists' and general garden use. The delphinium like spikes of double flowers, carried on stems 4'-5' long, are compactly placed on the upright growing plants, requiring only about one-half the space needed for the old stock flowered type of Larkspur.

BRIEF CULTURAL NOTES

ZINNIAS: Zinnias are warm weather loving plants and should never be sown until the soil has thoroughly warmed up and all danger of any frost has passed. For best results, especially with the smaller flowered, early blooming varieties, we recommend sowing the seed where the plants are to flower. The taller growing, large flowered sorts can safely be transplanted, although they also will make a more robust growth and will produce more flowers if they can be sown where the plants are to bloom, and then when the seedlings are 3" or 4" tall, thinned to the proper distance. To induce a thrifty, heavy root system, irrigate your plants rather than sprinkling. Dig a little trench alongside the row and let the water run slowly for several hours so it will seep down deep into the ground and make the food in the soil available for the plant throughout the mass of feeding roots. Always cultivate after each irrigation to conserve moisture. By this method you will have to water Zinnias only once every two weeks or so, whereas if the ground is merely sprinkled, you will have to repeat the sprinkling every other day or so. Irrigation not only gives a stronger, healthier plant, but also saves on your water bill.

CALENDULAS: Calendulas are definitely cool weather loving plants and in the warmer climates should be sown in the autumn for early bloom in the late winter or early spring. While they like full sun, they cannot stand the burning sun of summer. In colder climates, seed should be started in the cold frame and plants set out as soon as possible for late spring and early summer bloom. In planting Calendulas, be sure and choose the proper type for the use you have in mind. There are forcing varieties for greenhouse growing and garden varieties for outdoor growing. The outdoor varieties make a sturdier, more compact growth and are very desirable for garden use, while the forcing varieties are developed especially for the cut flower trade and do best under greenhouse conditions.

GODETIAS: In their native California, the Godetia seeds on the hillsides sprout with the first winter rains and grow during the cool, wet winter months and come into flower during late spring, hence their name, Farewell-to-Spring. Given similar treatment in the garden, they will give their best bloom. Sow the seed broadcast late in the fall and allow them to remain undisturbed during the winter months. In the spring they will grow quickly as the soil warms and bloom profusely during late spring. Best results will be obtained by this method as they cannot tolerate the very strong summer sun.

GOURDS: Gourds should be sown where the plants are to remain and should not be planted until late in the spring after the soil is thoroughly warm and nights as well as days are warm. For best results sow in a warm, sandy location, somewhat on the dry side. Provide enough water for a normal growth until the flowers appear, after which no further irrigation should be necessary. Watering during the flowering period will cause dropping of flowers and buds, and consequent loss of Gourds. For perfect-shape specimens, vines should be trained up on a fence or trellis and the Gourds allowed to hang, thus assuring straight necks and preventing rotting or discoloration from the soil. Do not harvest the Gourd crop until the fruits are thoroughly matured. This will be when the stem becomes brown and hard and pressure with the fingernail cannot dent the shell of the Gourd. After picking, Gourds should be hung in an airy, dry place until thoroughly cured. The large, hard-shelled varieties are then washed and scrubbed before decorating. The small, colorful varieties are wiped clean of dust and given a light coating of varnish or shellac. If thoroughly dried before treatment, Gourds should last several months for house decoration.

IPOMEAS: In growing Ipomeas, never plant until the soil is thoroughly warm. If it is too cool, the seeds will rot instead of germinating. Even in such warm sections as Southern California, seed should not be sown until late May. To aid germination of particularly hard-seeded varieties, filing a small notch at the top of the seed will help considerably. Always select the driest, sandiest part of the garden and sow where the plants are to flower as the Ipomeas resent transplanting. Plants should be kept on the dry side in order to induce early and abundant flowering with a rather sparse growth of foliage. Heavy watering will stimulate foliage growth at the expense of flowers. A poor soil is preferable to a rich one and fertilizer should not be used as this will promote heavy foliage which will hide the flowers. Ipomeas show off to best advantage when planted against a wall, fence or trellis.

LARKSPURS: Larkspurs are cool weather plants and for best results should be sown in the fall. In warm sections, such as Southern California, they are sown as early as August, broadcast where they are to bloom and if for the cut flower market, are sown thick like radishes and the entire plant pulled to go to market. For the home garden, on the other hand, plants are thinned out to the proper distance and allowed to branch normally for a more brilliant show of color. In the colder sections, seed should be sown broadcast in November in its permanent position in the garden. If very severe, a light mulch covering should be applied. Seed will, therefore, remain stratified and dormant throughout the winter months and with the spring thaws and first warmth will germinate and commence to grow. As Larkspur seed requires a chilling for best germination, this is the ideal treatment for best results.

MARIGOLDS: The African Marigolds are strong feeders requiring plenty of water. This type should therefore be planted in the richest, most favorable section of the garden. Seed may either be sown where the plants are to flower or can be started early in a seed bed and the seedlings set out to their permanent position later on. They transplant very readily. French Marigolds on the other hand are very light feeders and require a very small quantity of water. Too strong feeding and too heavy watering will throw them into foliage growth with a great scarcity of flowers. For a free-flowering, colorful plant, select the poorest soil, keep the plants on the dry side and do not fertilize. Seed may be sown where the plants are to flower or seedlings can be transplanted from the seed bed although better results will probably be obtained by sowing in place. Marigolds are fairly hardy and should be started early in the spring.

PETUNIAS: The chief pitfall the amateur runs up against in growing Petunias is in the seed sowing. Almost invariably they bury the tiny seeds so deeply that the sprouting seedlings cannot possibly fight their way to the surface. Petunia seed must be sown with the very utmost carefulness. A seed flat or a seed pan should be used, a light, loamy soil carefully prepared, properly moistened and finely screened, the box filled to within a half-inch of the top with ample drainage on the bottom and tamped down firmly, smoothly and evenly. Then the seed should be mixed with about a teaspoonful of sand and this mixture of seed and sand sprinkled carefully and thinly over the surface of the seed box. A very fine sprinkling of pure sand, not more than $\frac{1}{8}$ of an inch, may be used on top of this mixture or it may be left without any further covering. A pane of glass or a damp burlap sack or folded newspapers should then be placed over the flat and left there until the seeds begin to sprout. Immediately after the first sprout appears, this heavy shading must be removed and a single layer of gauze substituted. If the soil has been properly moistened when it is being prepared for sowing, it will not have to be watered again until the seedlings have developed their third and fourth leaves. If the soil appears to be drying out, however, water is to be applied with a very fine-spray hand bulb, or better still, the pan or flat placed in a tray of water to allow moisture to soak upwards from the bottom. Always leave the seed box in a well-ventilated place, but without any draft, to prevent damping off. When the seedlings are large enough to handle, they should be pricked off into a second flat or small pots for a few weeks before setting out in their permanent position in the garden.

SCABIOSAS: While the annual Scabiosas will bloom during the summer, they do so much better in the early spring than during the hot summer days, that every effort should be made to start the seed in the early fall in warm sections or in cold frames in early spring in the more northerly sections. In warm sections, such as Southern California, plants will winter over perfectly well and produce extremely early flowers the second year. Scabiosas enjoy full sun and will thrive in any good garden soil.

APPROXIMATE NUMBER OF SEEDS PER OUNCE

Acroclinium	9,000
Ageratum Dwarf	214,000
Alyssum	60,000

FLOWER SEED
GROWERS

EL MONTE, LOS ANGELES COUNTY
CALIFORNIA, U. S. A.

September 29, 1939

Gentlemen:

Enclosed herewith is the anxiously awaited copy of our 1939-40 Novelty and General Trade List. Perhaps we should apologize to you for the lateness of this publication, but we have been waiting as long as possible to get last minute reports on our crops and market conditions in order to adjust prices and come to decisions regarding novelty introductions.

Even with this long delay, we are now unable to supply seeds of one of the novelties we have featured, Violettas "The Little Dwarfs". After the catalog was printed we received word from Dobbie & Co., Ltd., the introducers, that this variety is being withheld from introduction for this season due to unsettled economic conditions.

Crops in general are not overabundant and many are weighing in even lighter than anticipated. This general undersupply, combined with shortages which are developing in other growing sections, making heavy demands on us, point toward an early sell-out on practically all flower seed items. We strongly urge you to get your orders to us at once so you will be one of the foresighted seedsmen who covered well in advance of the selling season and will not be caught short at the last moment.

In view of the generally unsettled economic conditions at this time, we ask for your cooperation to assist us in planning our acreage this year by sending your contract orders for 1940 crop seed just as soon as you possibly can. This especially applies to Sweet Peas and other varieties where large quantities of seed are used. As our planting is done in November and December, any information you can give us now as to your tentative requirements will be doubly appreciated this year.

We sincerely hope that your business will be brisk and remunerative during this coming season.

Yours very truly,

EMB:P
Enc.
